Enigma Health enables online prescriptions for UK pharmacies using Rockliffe email server technology

Online prescription renewal service uses Rockliffe MailSite email server

Campbell, CA – March 29, 2004- Rockliffe, Inc., a developer of email server and secure email software for enterprises, service providers and small businesses, today announced that Enigma Health plc has embedded Rockliffe MailSite email server technology into Scriptserve, a secure online service for patients to re-order prescription medicines from their local pharmacy. Scriptserve is part of the Nexphase Pharmacy Business System that enables pharmacists to connect directly with patients via the Internet.

Nexphase is the replacement for Mediphase, the leading Pharmacy Business System used by 4,000 UK pharmacies to dispense medication to their patients and accurately claim reimbursement from the National Health Service. The long awaited Nexphase includes Scriptserve, a secure online service for patients to re-order prescription medicines from their local pharmacy. Underlying Scriptserve is the powerful MailSite email server engine which safely and securely delivers renewal request messages from patient to pharmacy and then logs the request into the Nexphase patient database.

“We needed a highly resilient Windows-based message transfer agent for Scriptserve that could be integrated into Nexphase's sophisticated patient management system,” said David Farrow, Director of Customer Services for Enigma. “We evaluated several well-known options and selected Rockliffe MailSite because of the ease with which we could add additional capacity and resilience, because of MailSite's ability to integrate with Microsoft SQL databases, and because of the great quality of the MailSite product.”

"Nexphase is an exciting solution that enables UK pharmacies to use the Internet to build closer relationships with patients by creating a simple, efficient and convenient method for re-ordering prescriptions. We are delighted that our MailSite email server technology is a part of that solution," said Alun Davies, VP Marketing and EMEA Operations at Rockliffe. "Rockliffe technology will help increase Enigma's lead in the UK pharmacy market. We look forward to working with Enigma to continue to meet the demands of a market that requires exceptionally high standards of security and reliability."

About Enigma Health plc

Enigma Health PLC is the UK's leading supplier of pharmacy systems with over 4000 pharmacies using their software. Based in Cobham, Surrey it supplies the Mediphase system throughout mainland Britain. Enigma has now developed Nexphase, a windows based Pharmacy system which is being rolled out to both new and existing customers.
