## ***Robust mail server software delivers unmatched scalability on Windows NT***

***Rockliffe MailSite is the first to deliver rock-solid scalability and  
performance now***

SANTA CLARA, CA -- January 19, 1999. Rockliffe Systems Inc., the industry's emerging developer of Internet-based electronic mail server software for enterprise applications, announced today that Rockliffe MailSite is ready to meet Microsoft's enterprise challenge with real-world customer successes.

In a year that Microsoft's CEO and Chairman Bill Gates recently announced as the Microsoft push for the enterprise, Rockliffe is the first to deliver true rock solid scalability and performance with Rockliffe MailSite on Windows NT. By delivering unique capabilities, Rockliffe MailSite provides a reliable, Internet standards-based and low cost communications platform for modern businesses.

Planetary Motion, a leading supplier of integrated electronic mail and telephony services, is one example of a company that has built its business on Rockliffe MailSite. "Scalability is where Rockliffe MailSite really shines" said Planetary Motion chairman and CTO Robert Newman. "It's currently handling 130,000 CoolMail users on just one NT server, saving us a lot of money."

While scalability can be achieved in many ways, Rockliffe MailSite provides extreme scalability by serving hundreds of thousands electronic mail users on one single Windows NT server. This level of scalability dramatically reduces the "server farm" required by competing products and thereby significantly lowers the cost of deployment and ownership.

Underwriting the scalability of the product is Network World Magazine in its November 30<sup>th</sup>, 1998 edition. Network World stressed eight IMAP server products using its benchmark software and awarded Rockliffe MailSite as the best performing Internet standards-based electronic mail server software in the Industry.

Rockliffe understands that merely delivering a rock-solid product is not enough to meet the mission-critical messaging needs of large enterprises. Rockliffe complements its flagship product with rock-solid support services and provides immediate response, quality follow-up and unique callback services to make sure every implementation of Rockliffe MailSite is used to the fullest extent.

"Rockliffe MailSite is a sure bet for modern companies that rely on electronic mail services as a means to communicate effectively and reliably with customers and suppliers," said Rockliffe's President John Davies, who is delighted to see demand for his products grow at more than 250% every year.

Rockliffe, having spent the last two years building a rock solid product foundation, is excited about the fast growing number of customer and industry endorsements it is receiving. In the near future Rockliffe plans to reveal aggressive steps to increase its market penetration.

Rockliffe MailSite provides electronic mail and list server software based on the Internet standards POP3, IMAP4 and SMTP. Rockliffe MailSite connects seamlessly with more than 40 types of electronic mail client software packages such as Microsoft Outlook 98, Microsoft Outlook Express, Netscape Messenger and Eudora Pro.

Rockliffe MailSite integrates with alternative communications mechanisms such as FAX, voice-mail, telephony, wireless telephones, Palm computers and paging services. Rockliffe MailSite can be used as the foundation for unified messaging, providing a single point of access to all information.

### ***About Rockliffe Systems***

Rockliffe Systems, Inc., is the emerging provider of scalable, rock solid, standards-based communications software and services on Windows NT. Rockliffe is ready to meet the growing needs of dynamic companies that depend on effective communication with customers and suppliers.
